## Education

### University of Lagos

*Bachelor of Engineering, Major in Mechanical Engineering*

2026 Academic Standing: First Class (CGPA 4.50/5.00)

**Lagos, Nigeria**

*Expected Aug 2028*

## Technical Skills

Java, Spring Boot, Go, Python, TypeScript, Node.js, Express, FastAPI, React, Next.js, PostgreSQL, MySQL, MongoDB, Redis, TypeORM, BullMQ, Docker, AWS (EC2, S3), GitHub Actions, CI/CD, Linux, Git, GitHub, REST, GraphQL, WebSockets, Data Structures and Algorithms.

## Work Experience

### Nevo

*Founding Backend Engineer*

**Lagos, Nigeria**

*Feb 2026 – Present*

- Architected the entire backend as first engineering hire (FastAPI, PostgreSQL, Redis, Docker) — owning schema design, API contracts, and every deployment — cutting average API response time to under 80ms and enabling the platform to onboard its first 200+ learners with zero downtime.
- Shipped an SLM inference pipeline that personalizes lesson content per learner inside the request path, delivering rewrites in under 400ms — 6× faster than a comparable LLM-based approach — while remaining the cost-efficient backbone still serving production today.
- Implemented a fault-tolerant async ingestion system on BullMQ workers for PDFs, lecture notes, and structured curricula — with retry and dead-letter handling — achieving a 99.8% successful parse rate across all user uploads.

### Avzdax Technologies

*Backend Engineer Intern*

**Lagos, Nigeria**

*Jan 2025 – Jan 2026*

- Developed FastAPI microservices sustaining 50+ concurrent data streams at sub-250ms p95 latency for a real-time mobility security platform.
- Integrated OpenCV and ML classifiers into the production backend, benchmarking model output against manual review to cut review time by 60% while holding false-negative rates acceptable to operators.

## Projects

**ULES E-Voting Platform** | *TypeScript, Node.js, Express, MongoDB, Redis, WebSockets*

2025

- Built the platform that ran UNILAG's faculty elections end-to-end — processing 20,000+ votes from 3,500+ verified voters at sub-50ms response times under peak load, with MongoDB multi-document transactions and Redis-backed rate limiting ensuring no ballot was ever double-counted, replayed, or dropped.
- Broadcast live tallies to election monitors over WebSockets, compressing result compilation from 24 hours to under 10 minutes and retiring manual counting for faculty elections entirely.

**PIDEC 1.0 — Faculty Competition Platform** | *TypeScript, Express, Supabase, BullMQ, Groq Vision, Gemini*

2026

- Built the platform behind UNILAG's first inter-departmental engineering competition, covering team registration, staged submissions, judge scoring, and automated AI checks on entry documents queued through BullMQ so judging never blocked on inference.

**FairPlay Africa** | *Node.js, MongoDB, Gemini AI, Bull Queues*

2025

- Detected pirated content at sub-300ms matching latency through an event-driven architecture fanning parallel Gemini inference jobs across independent content streams; won the ACM Hackathon Grand Prize (NGN 10M / \$6,500) against 120+ teams.

## Leadership Experience / Volunteering

### ECX UNILAG Engineering Community (Development Lead)

**Sep 2025 – Present**

- Led and mentored 10+ student engineers across concurrent production projects, running code review and setting the engineering standards the team ships against.
- Replaced Google Classroom with an [in-house LMS](#) serving 1,000+ members; shipped ECX Forms, a dynamic form builder with multi-step flows and conditional logic; profiled and re-architected the ECX Go link shortener, cutting redirect latency from 200ms to under 50ms across 10,000+ monthly redirects.
- Launched the ECX Merch Store on a custom Paystack cart-to-checkout flow, clearing NGN 500k+ in first-week revenue.

## Publication & Awards

- Co-authored and presented **SPE Paper 599** — smart downhole pressure gauges with embedded AI — solo at NAICE 2026.
- **AfriHackBox 1st Place, Cybersecurity** (\$1,000) with Aegis AI, a semantic phishing detector, Nov 2025; **3MTT South-West Regional Champion** (Nevo, Dec 2025); **UNILAG Engineering Rookie of the Year**, Aug 2025; 12× hackathon winner.
